Luca Di Stefano

Curriculum vitae
March 2022

Personal information

E-mail: luca.di-stefano@inria.fr
Work address: 655 avenue de l'Europe, 38334 Montbonnot, France
Web page: convecs.inria.fr/people/Luca.Di-Stefano/

Research interests

My research mainly concerns the formal modelling and analysis of agent-based models of complex collective systems. On one hand, this entails the development of formally defined high-level languages to concisely describe the features of individual agents; on the other hand, it requires applying and improving state-of-the-art verification techniques to check the collective behaviour of the resulting system.

Keywords associated with my interests include:

Modelling: Agent-based modelling, Attribute-based communication, Collective adaptive systems, Domain-specific languages, Multi-agent systems, Process algebras, Stigmergic interaction, Structural operational semantics, Temporal logics.

Analysis: Bounded model checking, Explicit-state and symbolic model checking, Software verification, Static analysis.

Education

Gran Sasso Science Institute	**L'Aquila, Italy**
PhD in Computer Science	*November 2016 – October 2020*

Thesis: *Modelling and Verification of Multi-Agent Systems via Sequential Emulation*

Advisors: Rocco De Nicola, Omar Inverso

URL: hdl.handle.net/20.500.12571/10181

Other activities: Student representative in the academic senate (2018–2020).

University of L'Aquila	**L'Aquila, Italy**
MSc in Computer Science and Systems Engineering	*March 2014 – October 2016*

Thesis: *Design of a reactive system for autonomous UAV navigation in unknown environments*. Thesis written in Italian. Original title: *Progettazione di un sistema reattivo per la navigazione autonoma di un drone in ambienti sconosciuti*.

Advisors: Eliseo Clementini, Enrico Stagnini

Final grade: 110/110, *cum laude*

Official degree name: *Ingegneria Informatica e Automatica*.

Positions held

CONVECS, Inria/LIG | **Grenoble, France**

Post-doctoral researcher | *November 2020 – Present time*

The aim of this post-doc is to enable efficient model checking of temporal properties in the context of collective adaptive systems. Building upon previous work with the CONVECS team, I developed an automated translation of a state-based temporal property language into MCL (an extension of the alternation-free fragment of the modal μ-calculus), and used it to verify a selection of systems. I am also investigating how compositional verification techniques may help with model checking of large systems.

SySMA, IMT Lucca | **Lucca, Italy**

Grant holder | *December 2019 – October 2020*

The grant topic was "Verification of Emerging Properties in Collective Adaptive Systems". I adapted a structural encoding procedure I had been working upon as part of my PhD to multiple verification tools implementing a variety of techniques, including predicate abstraction, k-induction and property-directed reachability.

CONVECS, Inria/LIG | **Grenoble, France**

Visiting PhD student | *March – July 2019*

As a visitor at CONVECS I focussed on topics related to my thesis, such as defining a structural encoding of multi-agent systems in the LNT specification language and using it to verify these systems through model checking.

Teaching

Polytech Paris-Saclay | **Paris, France**

MSc course in Modelling and Verification | *April – May 2021*

36-hour course for Master students in Computer Science Engineering, *filière apprentissage*. Held remotely as a supply teacher (*intervenant vacataire*). The course focused on the following topics: modelling of concurrent systems through communicating automata (labelled transition systems); behavioural equivalences; process algebras (CCS, LNT); modal and temporal logics (HML, μ-calculus, MCL); model checking; modelling of real-time systems through timed automata; model-based testing. Tools such as CADP and UPPAAL were showcased in lab sessions.

Other academic activities

Reviewing activity

I have served as a reviewer or sub-reviewer for the following conferences and journals:

- International Conference on Autonomous Agents and Multiagent Systems (AAMAS)
- International Symposium on Formal Methods (FM)
- International Conference on Formal Techniques for Distributed Objects, Components, and Systems (FORTE)
- International Conference on Software Technologies (ICSOFT)

- International Conference on Software Engineering and Formal Methods (SEFM)
- Science of Computer Programming, Elsevier
- Theoretical Aspects of Software Engineering Conference (TASE)

Participation to PhD schools..

1st VMCAI Winter School   **Lisbon, Portugal**

January 2019

The school featured lectures on several topics associated with the VMCAI conference series, including: abstract interpretation (Patrick Cousot, New York University); computing with SAT oracles (João Marques-Silva, University of Lisbon); neural network verification (M. Pawan Kumar, University of Oxford); verification of distributed protocols (Ken McMillan, Microsoft Research).

Invited presentations..

- *Verifying collective adaptive systems by emulation.* Remote presentation to the Formal Methods unit of the Computer Science and Engineering department at Chalmers Institute. Gothenburg, Sweden, 10 March 2022.

- *Multi-agent (smart) systems with virtual stigmergies.* Kickoff meeting of Italian national research project (PRIN) *IT MATTERS: Methods and Tools for Trustworthy Smart Systems.* Pisa, Italy, 14 October 2019.

- *Multi-agent systems with virtual stigmergies.* Invited presentation at IMT School for Advanced Studies. Lucca, Italy, 3 July 2018.

Skills

Technical skills: My experience in programming spans more than a decade. As of now my languages of choice are mainly F# and Python, but I have worked with a number of popular languages across the years (e.g., C, C++, C#, Erlang, Go, Java, Prolog). I have some knowledge of control theory, computer architectures, assembly languages, and hardware description languages (mainly VHDL). I am also familiar with version control systems such as Git and Subversion.

Language skills: Italian is my first language. I am fluent in English (CEFR level C1–C2) and have some knowledge of French (CEFR level A2–B1).

Soft skills: Having been the main contributor to all my publications so far, I have acquired good academic writing skills, as well as an ability to work in groups, meet deadlines, and present my ideas both to my team mates and to external audiences.
